## DISCUSSION

The Old Lufkin Creosoting Plant site is an eight acre former wood treating facility. The <sup>site</sup> contains several areas of contaminated soil; however, the site is fenced to prevent access. Three ground water wells exist within a mile of the facility, the nearest is 0.9 miles distant. Due to the distance, migration to a significant receptor population is unlikely. The City of Lufkin receives its drinking water from an aquifer 1100 feet below the surface. The nearest perennial stream is greater than 2 miles from the site. *its*

Due to the lack of a hazardous waste migration and receptors near the site, the Old Lufkin Creosoting Plant site does not meet the minimum criteria of a viable candidate for inclusion on the Superfund National Priorities List; therefore, the site is designated a disposition of No Further Remedial Action Planned (NFRAP), and at this time does not warrant further investigation under Superfund.

This site is being referred to the State of Texas for any appropriate action under the state's regulations.

## APPROVALS

Disposition Recommended by: Lon Biasco  
(Site Assessment Manager)
